

MOHAMED RAYN

Computer Science Engineer | Cybersecurity Specialist | AI/ML Security

Sharjah, UAE | +971-569262354 | cyanexr@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Valid UAE Driving License & Own Vehicle

PROFESSIONAL SUMMARY

Detail-oriented Computer Science Engineering student (CGPA 8.45/10) with a minor specialization in Cybersecurity. Experienced in penetration testing, vulnerability assessment, network security, and incident response through hands-on internship and project work. Proficient in Python, Java, SQL, and industry-standard security tools including Metasploit, Wireshark, and Nmap. Demonstrated ability to design and deploy AI-driven security systems and SOC dashboards. Seeking a full-time role in Cybersecurity, Software Engineering, Database Administration, or IT Support in the UAE.

TECHNICAL SKILLS

Cybersecurity: Penetration Testing, Vulnerability Assessment, Network Security, Incident Response, Digital Forensics, Ethical Hacking, Threat Detection, SIEM, SOC Operations, Metasploit, Wireshark, Nmap, Kali Linux

Programming Languages: Python (Security Scripting, Automation), Java, Dart (Flutter), HTML, CSS, JavaScript

Databases & Systems: Microsoft SQL Server (T-SQL), Firebase, Linux (Kali, RHEL), Windows Server, VMBox, Active Directory

AI & Machine Learning: Scikit-learn (Random Forest, Isolation Forest), BERT NLP, Deep Learning, Data Visualization (Plotly), REST APIs

Tools & Methodology: Git, GitHub, VS Code, Agile Development, FastAPI, Streamlit, Scapy, VirusTotal API, Technical Documentation

PROFESSIONAL EXPERIENCE

[Flamingus Technologies](#) | Cybersecurity Consultant Intern

UAE | July 2025 – August 2025

- Conducted penetration testing engagements using Kali Linux and Metasploit Framework, identifying critical system vulnerabilities and reducing attack surface.
- Performed comprehensive vulnerability assessments and security audits on simulated enterprise infrastructures using VMBox to map attack vectors and threat entry points.
- Authored detailed technical security reports for senior management, documenting risk findings, CVSS severity scores, and actionable mitigation strategies.
- Developed and documented standard operating procedures (SOPs) for network security monitoring and incident response workflows.

PROJECTS

[NetworkGuard AI](#) | Python | Scikit-Learn | Streamlit | Scapy

- Engineered a real-time Network Anomaly Detection System (NADS) with an interactive SOC dashboard to intercept, process, and classify live network traffic at scale.
- Implemented a dual-model AI engine using Random Forest (supervised) and Isolation Forest (unsupervised) to detect both known cyber threats and zero-day anomalies.
- Integrated deep PCAP forensic extraction and 3D PCA visualizations for advanced threat analysis and incident investigation.

[ThreatDefend AI](#) | Python | FastAPI | Transformers (BERT) | Chrome Extension

- Developed a real-time phishing and spam detection Chrome Extension backed by a local FastAPI server, enabling on-device content analysis with no data leakage.
- Engineered local AI text classification using BERT-tiny transformer model and integrated VirusTotal API for dynamic DOM scanning and in-page threat highlighting.

[AI-Based Forensic Log Analysis](#) | Python | Streamlit | Scikit-Learn | Plotly

- Built a SOC dashboard for real-time behavioral anomaly detection in system logs using machine learning algorithms and statistical analysis.

- Engineered forensic modules including PCA-based behavior clustering, risk heatmaps, and automated alert generation for security operations teams.

[Hotel Haven App](#) | [Flutter](#) | [Dart](#) | [Firebase](#)

- Engineered a full-stack cross-platform mobile application with real-time room availability, booking management, and secure Firebase authentication.

[Car Hunt Specifications Portal](#) | [HTML](#) | [CSS](#) | [JavaScript](#) | [REST APIs](#)

- Built a responsive web platform integrating third-party REST APIs to fetch and display dynamic vehicle specification data with real-time filtering.

EDUCATION

[Manipal Academy of Higher Education](#) | B.Tech – Computer Science Engineering *Dubai, UAE* | *Sep 2022 – Present*

- Minor Specialization in Cybersecurity | CGPA: 8.45/10
- Relevant Coursework: AI in Cybersecurity, Ethical Hacking, Database & Application Security, Digital Forensics, Cryptography, Social Network Analysis, Deep Learning, Data Structures & Algorithms, Computer Networks, Operating Systems, Compiler Design, OOP, Software Engineering

[Habitat School Al Jurf](#) | High School Diploma (CBSE)

Ajman, UAE | *Completed 2022*

CERTIFICATIONS

Cybersecurity: Introduction to Networking – CCNA (2024) | Foundations of Cybersecurity – Google (2025) | Digital Forensics Concepts (2025) | Red Hat System Administration – RHCSA (2024)

AI & Data Science: Deep Learning Specialization (2025) | Natural Language Processing Essentials (2025) | Build Basic GANs (2025) | Database Management Essentials (2024) | Mathematics for ML: Linear Algebra (2023) | Statistics with Excel (2024)

IoT & Management: Industrial IoT (2025) | Introduction to IoT & Embedded Systems (2025) | Project Management Basics – PMI (2025) | Firm Level Economics (2025)

SOFT SKILLS & LANGUAGES

Core Competencies: Analytical Problem Solving, Technical Documentation, Cross-functional Team Collaboration, Adaptability, Attention to Detail, Risk Assessment

Languages: English (Fluent) | Hindi (Fluent) | Tamil (Fluent)
